SUMMARY

Lead Data Analyst with 9+ years of experience designing scalable analytics, automation, and data-quality control frameworks for global banking and financial-services clients. Specialized in regulatory trade reporting, exception root-cause analytics, governance MI, AML/KYC screening, and high-volume data-quality automation. Hands-on across Python, SQL, Snowflake, PySpark, Alteryx, Power BI, applied ML, and NLP, with ownership of solution architecture, code quality, stakeholder translation, and mentoring for a technical team.

EXPERIENCE

Senior Process Manager | eClerx | Pune | January 2019 - Present

- Architecting a multi-source SQL classification framework to decompose ~40K trade reporting **exceptions** into root-cause **themes** across execution, allocation, and CCP data, replacing brittle rule-based tagging and enabling scalable upstream remediation.
- Designed and delivered Python/SQL-based **Stratification and Natural Break Point analytics** across Snowflake and relational databases, converting large trade reporting populations into risk-ranked strata/clusters, optimized test thresholds, and Power BI governance reporting for multiple regulators.
- Re-architected a regulatory trade control from ML-based **Reportability Prediction** to an auditable rule-based framework, using SHAP analysis on XGBoost, LightGBM, and Random Forest prototypes with ~99% F1 to validate deterministic reportability patterns.
- Built Alteryx Server workflows applying specification-driven **Trade Eligibility** rules across ~5M upstream and reported trades per cycle, classifying reporting populations for BA review and delivering €1.6M annualised savings, 3 FTE reduction, 33 legacy issue closures, and 5 new reporting gap detections.
- Built and enhanced scalable PySpark and Snowflake SQL-based data-quality **Diagnostic Controls** across regulatory trade-reporting datasets, codifying rules for mandatory fields, illogical values, cross-field dependencies, lifecycle inconsistencies, and regulator-defined expectations.
- Automated daily exception detection across reported trade populations, converting millions of field-level breaks into grouped issue patterns used by testing teams to raise observations and drive upstream reporting remediation.
- Co-developed a **KYC Negative News Screening Engine** for a global European bank, building spaCy NLP components for named-entity recognition, dependency parsing, coreference resolution, and rule-based AML screening scenarios.

Application Development Analyst | Accenture | Pune | November 2016 - January 2019

- Developed RESTful and SOAP-based Java microservices for telecom **middleware** enabling **communication** between network-management endpoints, with comprehensive JUnit test coverage, Gradle build pipelines, and Jenkins-integrated deployment workflows.
 - Authored technical documentation and API interface specifications, collaborating with cross-functional teams to ensure clarity in system integration and support downstream development and testing.
 - Extracted and transformed Splunk network log data using Python, performing data wrangling and feature engineering to convert unstructured logs into analysis-ready datasets used by the team's **downstream network-analytics** and **anomaly-detection** models.
-

SKILLS

Programming: Python, SQL, R, Java

Data Platforms & Databases: Snowflake, Greenplum, IBM DB2, Alteryx Designer, Alteryx Server

BI & Reporting: Power BI, Tableau, Excel automation, KPI dashboards, executive reporting

Machine Learning & NLP: XGBoost, LightGBM, Random Forest, spaCy, Named-Entity Recognition, Dependency Parsing, Coreference Resolution, Feature Engineering, EDA, Model Explainability, ELI5, SHAP

Engineering & Delivery: Jenkins, Autosys, Git, JIRA, Data Pipeline Design, Production Deployment

Domain: Regulatory Trade Reporting (EMIR, CFTC, SEC, CAT, HKMA, SFTR, ASIC, MAS, JFSA, CSA), Exception Management, KYC, AML Screening

EDUCATION

Bachelor of Engineering (Information Technology) | Savitribai Phule Pune University | 2016
